GLENN AVENUE RECONSTRUCTION

average traffic volume of 6,800 vehicles per day. The final phase of reconstruction (South Cecelia Street to South Rustin Street) provides

a rebuilt roadway with new utilities all the way from South Cecelia Street to the Hillcrest Shopping Center.

The project involved a full reconstruction with new pavement, sidewalks, driveways, retaining walls, water main, sanitary sewer, storm sewer and subdrains. Also the project included the realignment of South Alice Street to create a true cross intersection to improve safety along the corridor.

This project required four acquisitions of property and 16 temporary easements. A Critical Closure Incentive was included as well as a Final Completion Incentive/Disincentive.

COMPLETION DATE

2020

PROJECT HIGHLIGHTS

- In order to improve intersection geometry and safety, the intersection of South Alice and Glenn was realigned.
- Because of the impacts and disruption to the homes and businesses, McClure and the City coordinated public open house meetings to inform the public and get feedback.
- In-depth and intensive coordination with MidAmerican Energy and other utility companies.
- Due to federal aid requirements, the project followed the lowa DOT project development process.
- The project was 80% funded through STP.
- The project included a detailed staging layout to allow for continuous access to residents along the corridor during construction.
