PROJECT DESCRIPTION

The City of Independence moved its farmers' market to a permanent facility that features an enclosed pavilion and a standalone open-air facility. The project team worked to understand and implement the strategic plan of the mayor, city manager, public works department, and community stakeholders.

McClure provided its survey, design, and construction services to the project. It first tasked the in-house survey department with performing detailed topographic and boundary surveys of the project limits and developing an accurate base map. McClure also developed a site layout and grading and drainage concepts.

PROJECT HIGHLIGHTS

- Other services provided by McClure included landscape architecture and mechanical, electrical, and plumbing design services for the event facility
- McClure assisted the design-build team with applications and permits, reviewing drawings, and answering questions about the design
