

# BOONE HOSPITAL CENTER

COLUMBIA, MISSOURI

## PROJECT DESCRIPTION

This was a new three-story office building. This was a high-profile steel structure with a large port-cochere and protruding exterior features. The project included a walk-out lower level with high concrete basement walls and columns and a large two-story vaulted atrium with a curved steel stair case.

McClure served as the EOR and worked with the architect and design team on this local project. The project turned out great and is a delightful focal point at a heavy intersection on the south side of town.

## PROJECT HIGHLIGHTS:

- A large steel frame building with large open spaces
- Intricate exterior features, parapets, and signage with all brick features
- Large port-cochere designed to match the existing Boone Hospital Building in the center of town.

## COMPLETION DATE

2016

## COST OF SERVICES

\$63,500
